NOTE: A module can consist of one or multiple (related) use cases. A team member in a group must be responsible to at least one module.

1. Introduction

1.1 Overview about the Company

Koperasi Kakitangan KADA Kelantan Berhad, a subsidiary of Lembaga Kemajuan Pertanian Kemubu (KADA) under the Ministry of Agriculture and Food Security, aims to improve the economic and social well-being of farmers in the Kemubu region. The cooperative provides its members with essential financial and administrative services, as well as the tools and resources they need to grow sustainably.

To streamline operations and improve efficiency, the cooperative intends to move away from its current manual processes and towards a comprehensive digital platform tailored to its organisational goals.

1.2 Problems

The existing manual system at **Koperasi Kakitangan KADA Kelantan Berhad** presents several challenges that significantly hinder the cooperative's efficiency and productivity.

Lack of a Centralized Member Database

Firstly, the system lacks a centralized member database. Member details are currently stored in physical records, which are time-consuming to organise and retrieve. Members are required to repeatedly provide personal information, such as their name, identification number, phone number, and email address, for every interaction. This creates unnecessary frustration and increases the risk of data loss or misplacement due to reliance on physical documents.

Disorganised Feedback Management

Secondly, there is no proper system for managing feedback. Feedback forms are collected from members after activities are handled manually, making it difficult for administrators to organize and analyze the data. Without a structured approach, it becomes challenging to track trends, identify areas for improvement, or address issues raised by members promptly. This lack of automation delays the use of valuable feedback, reducing the cooperative's ability to make timely improvements.

Cumbersome Reporting Process

Thirdly, the process of generating reports for board directors is cumbersome and inefficient. Preparing financial and operational reports requires significant manual effort, which is prone to human errors. These inaccuracies can compromise the quality of critical information presented to the board, while the delays in report preparation hinder their ability to make informed decisions in a timely manner.

Dependence on Human Resources

Another major issue is the heavy reliance on human resources to manage operations. Processes such as registration, loan applications, and feedback management are all handled manually, creating bottlenecks during peak periods. This dependence on staff for repetitive

and time-consuming tasks, such as data entry and verifications, reduces overall productivity and increases the likelihood of errors.

Incomplete Submissions

Furthermore, members often submit incomplete forms, primarily due to the frustration caused by repetitive and lengthy data entry requirements. These incomplete submissions disrupt administrative workflows, making it difficult to maintain accurate records and causing further delays in processing.

Limited Accessibility and Flexibility

The current system also lacks flexibility and accessibility. Members cannot easily check the status of their applications, financial statements, or participation records without contacting the cooperative directly. The absence of an online platform limits the cooperative's ability to engage effectively with tech-savvy members who prefer digital solutions, reducing convenience and overall user satisfaction.

Security Concerns

Security concerns further exacerbate the problems. Sensitive member information, such as personal details and financial data, is stored in physical records, exposing it to risks of unauthorized access, accidental damage, or loss. Without a proper audit trail, tracking access or modifications to member information is nearly impossible, posing a threat to privacy and compliance with data protection regulations.

Inability to Scale Operations and Member Dissatisfaction

Lastly, the system is not scalable. As the cooperative grows, the manual processes struggle to handle the increasing volume of member data, loan applications, and feedback forms. This limitation restricts the cooperative's ability to expand its services efficiently. Combined with the dissatisfaction experienced by members due to delays, repetitive tasks, and limited access to their records, these issues collectively impact the cooperative's reputation and its ability to retain members.

1.3 Proposal

To resolve the challenges faced by Koperasi Kakitangan KADA Kelantan Berhad, we propose the development of the KADA Registration System (KADA RS), a comprehensive digital platform designed to streamline and automate the cooperative's operations. This system aims to replace the existing manual processes, reduce inefficiencies, and improve overall user satisfaction for members, administrators, and board directors.

The system will feature a secure, centralized database to store and manage member information effectively. This will eliminate the need for members to repeatedly provide their personal details for every interaction. The centralized database will also ensure easy access and retrieval of records, significantly reducing the time and effort required for administrative tasks.

To address the issues with feedback management, the system will include a module for collecting and organizing feedback digitally. Members will be able to submit their feedback online after participating in activities, and administrators or clients will have access to a structured feedback database. This will make it easier to analyze trends, identify areas for improvement, and implement changes promptly.

Another critical feature of the system is automated report generation. Board directors will have access to real-time financial and operational reports generated by the system. These reports will include key metrics such as member participation, loan application statuses, and financial summaries, providing valuable insights to support informed decision-making. Automation will also minimize errors and ensure reports are prepared and delivered on time.

The system will simplify the registration process by enabling members to sign up for activities or events online. Member records will be automatically stored in the system, ensuring accurate record-keeping and easier management. Administrators and clients will have the flexibility to create and publish activity registration forms directly within the system or link to external forms, depending on their needs.

Additionally, the system will offer a comprehensive activity management feature. Administrators and clients will be able to create, edit, and manage activity details, ensuring clear communication and smooth organization. Members will have access to a list of published activities, allowing them to view details and register with ease.

The system will include role-specific dashboards designed to enhance user experience. Members will be able to view their activity participation, submit feedback, and receive notifications through their dashboards. Administrators will have tools to manage activities, registrations, and feedback, while board directors can access real-time reports and insights to guide strategic decisions.

Security is another priority of the proposed system. All data will be securely stored on a cloud-based platform with encryption, ensuring that sensitive information is protected from unauthorized access. Role-based access controls will further enhance security by restricting users to functionalities and data relevant to their roles.

Finally, the system will be designed to scale with the cooperative's growth. As the organization expands, the system will accommodate increasing volumes of member data, activities, and user interactions without compromising efficiency or performance.

By implementing the **KADA Registration System**, the cooperative will significantly reduce its reliance on manual processes, improve data accuracy and accessibility, and enhance overall efficiency. Members will benefit from a user-friendly platform that simplifies their interactions with the cooperative, while administrators and board directors will gain tools that make their roles more manageable and effective. This system will not only address the existing challenges but also create a solid foundation for the cooperative's future growth and innovation.

1.4 Definition, Acronyms, and Abbreviations

No	Acronym/ Abbreviation	Definition
1	KADA	Lembaga Kemajuan Pertanian Kemubu
2	Admin	System administrator responsible for managing the system
3	Client	Stakeholders organizing activities for members
4	Member	Registered cooperative members utilizing the system
5	Activity Registration	A process allowing members to sign up for activities
6	Report Generation	System feature for producing detailed financial and operational reports

2. Database System Requirement

2.1 System Overview

In this section we will be analysing the system framework and architecture with entity relationship diagram (ERD). The details for each module will be explained along with each ERD module attached to visualize the connections between entities and how each attribute interacts with each other. This will allow better understanding of the system and ease further system development.

The KADA Online System includes the following modules: register member, process membership and loan application, view financial status, apply for loan and process report. The system is designed to efficiently handle members and loan applications while ensuring proper data management in the KADA organization. Each module's description, functionality and requirements will be explained thoroughly.

2.2 Module <Register Member>

Person in-Charge: Neo Li Xin

2.2.1 Module Description

This module involves users.

1. Users can register as members by filling a digital form.

2.2.2 Transaction Requirement: Data Entry

1. Users are required to fill in their personal information such as full name, ID card, email and phone number.

2.2.3 Transaction Requirement: Data Update/Deletion

1. Users can update or delete the details when filling the form.

2.2.4 Transaction Requirement: Data Queries

No query in this module.

2.2.5 Local Conceptual Data Model (ERD) for Module 1

2.3 Module <Process Membership Registration and Loan Application>

Person in-Charge: Woo Cheng Shuang

2.3.1 Module Description

This module involves admin. They manage the following tasks:

1. View and verify members application
2. View and verify members' loan application

2.3.2 Transaction Requirement: Data Entry

No data entry in this module.

2.3.3 Transaction Requirement: Data Update/Deletion

1. Admin can update loan application details during loan application processing such as amount requested and financing period.
2. Member and loan applications can be deleted if they did not follow the requirements and policy.

2.3.4 Transaction Requirement: Data Queries

1. Admin can query the member and loan details such as member ID and loan application ID.

2.3.5 Local Conceptual Data Model (ERD) for Module 2

2.4 Module <View Financial Status>

Person in-Charge: Cheryl Cheong Kah Voon

2.4.1 Module Description

This module involves members.

1. Members can view their financial status, including outstanding loan amounts and approved loan details.
2. Members can also access the detailed breakdown of their transaction.
3. Admin can monitor the financial status of all members.

2.4.2 Transaction Requirement: Data Entry

1. Financial transaction data, including loan approval, repayment and penalty is entered into the system via an automated process.

- The payment record is automatically updated when the payment is made.

2.4.3 Transaction Requirement: Data Update/Deletion

No data update or deletion in this module.

2.4.4 Transaction Requirement: Data Queries

- Member can query their financial status to view details such as transaction history

2.4.5 Local Conceptual Data Model (ERD) for Module 3

2.5 Module <Apply for Loan>

Person in-Charge: Chau Ying Jia

2.5.1 Module Description

This module involves members, admin and the board of directors.

1. Members can apply for a loan by submitting the application form along with the required details, including personal information, the type of loan, and supporting documents.
2. Members can update or delete their application before approval. There is no modification once the result is out.
3. Members can view the status of the application and access their previous application.
4. Admin can review the application and
5. The board of directors can approve and reject the application.

2.5.2 Transaction Requirement: Data Entry

1. The member's necessary information is entered. The database will direct the information to the form if the member has previously filled in the member registration form by providing personal info. Otherwise, the member needs to fill out the form one by one.
2. After the form is submitted, the record will be stored in the database for future processing.

2.5.3 Transaction Requirement: Data Update/Deletion

1. The member can update or delete their application before approval.
2. No modification can be done once the result is out.

2.5.4 Transaction Requirement: Data Queries

1. List the applications submitted by each member.
2. Retrieve the status and details of active and historical loan applications.

2.5.5 Local Conceptual Data Model (ERD) for Module 4

2.6 Module <Process Report>

Person in-Charge: Lau Yee Wen

2.6.1 Module Description

This module is handling the generation, processing and viewing report within the system.

1. Members can view the personal financial report to track their transaction history, loan payment and member's activity within the system.

2. Admin and board of directors can review the report generated by the system such as member's activity, financial summary and user application status.

2.6.2 Transaction Requirement: Data Entry

No data entry in this module

2.6.3 Transaction Requirement: Data Update/Deletion

No data update or deletion in this module

2.6.4 Transaction Requirement: Data Queries

1. Members can query the system to generate a personal report based on their transaction history and loan status.
2. Admin and board of directors can query the data such as member's activity, financial summary and user application status.
3. Admin, member, and board of directors can filter the report by criteria like date range, loan type or payment status.

2.6.5 Local Conceptual Data Model (ERD) for Module 5

3. Global Conceptual Data Model (Global ERD)

3.1 Global Conceptual Design (ERD)

3.2 Verified Global Conceptual Design (Verified ERD)

Symbol	Transaction
U1	2.2.1.1
U2	2.3.1.1, 2.3.1.2

------	---------------------------

3.3 Data Dictionary for the global conceptual ERD

3.3.1 Identifying Entity

Entity Name	Description	Aliases	Occurrence
User	Represents any person accessing the KADA system	New user, guest	Occurs when first-time user visit the website
Member	Represents registered users who have created KADA accounts	Members	Occurs when new user or guest register as a member
Admin	Represents system admin who responsible for managing KADA system	Administrator, staff	Occurs when system built and processing members' account activity
boardDirector	Represents directors who oversee KADA system activities	Director, Manager, Supervisor	Occurs when user make registration or loan application
memberRegistration	Describe all activities when a user register as a member	Users	Occurs when a new user register as a member through KADA system
familyMemberInfo	Represents all the information about members' family members recorded	Members' family record	Occurs when user register as a member
feesAndContribution	Represents fees paid by members and any contributions made towards KADA	Contribution and fees record	Occurs when user register as a member
Loan	Represents loan applications submitted by members	Loan application record	Occurs when member apply for loan
guarantorDetails	Represents information about members' loan guarantors	Members' loan application guarantor details	Occurs when member apply for loan
FinancialStatus	Represents member's financial health	Members' financial reports / records	Occurs when member make a loan application and to check financial status
Transaction	Represents all financial transactions made by members	Accounts loan / fees transaction	Occurs when admin make an report to be viewed by members
Report	Stores generated reports related to financial	Monthly / yearly reports, financial	Occurs when a monthly or yearly

	summaries, transaction histories, or member activities	reports	report have to be published to the members by admin
Policy	Represents KADA policies applying for loan by members	policy lists	Occurs when admin validate the members' loan application

3.3.2 Identifying Relationship Types

Entity Name	Multiplicity	Relationship	Entity Name	Multiplicity
User	1..* 1..1	Submit Register	memberRegistration Member	1..* 1..1
Member	1..1 1..*	view Apply	FinancialStatus Loan	1..1 1..*
Admin	1..1 1..1 1..1 1..* 1..1	process follow process Monitor process	memberRegistration Policy Report Member Loan	1..* 1..* 1..1 1..* 1..*
boardDirector	1..1 1..1	Validate validate	memberRegistration Loan	1..* 1..*
memberRegistration	1..1 1..1	contain contain	familyMemberInfo feesAndContribution	0..* 1..*
Loan	1..1	contain	guarantorDetails	2
FinancialStatus	1..1	has	Transaction	1..*
Transaction	1..*	belong to	Member	1..1

3.3.3 Attributes Description

Entity Name	Attributes	Data Type & Length	Description	Nulls	Multi-valued	Example
User	userID (PK)	VARC HAR (8)	Unique ID for the user	No	No	U0000001
	email	VARC HAR (30)	User's email address	No	No	user@gmail.com

	password	VARC HAR (30)	User's account password	No	No	P12345W@ @
Member	memberID (PK)	VARC HAR (8)	Unique ID for member	No	No	M0000001
	password (FK)	VARC HAR (30)	Password for member login	No	No	P12345W@ @
	memberName (FK)	VARC HAR (80)	Name of the member	No	No	Ali Abu
	ic	CHAR (12)	Identification number of the member	No	No	04010108123 4
	email (FK)	VARC HAR (30)	Member's email address	No	No	member@gm ail.com
	phoneNumber	VARC HAR (15)	Contact number of the member	No	No	+6012345678 9
	sex	CHAR (1)	Gender of the member (M/F)	No	No	F

4.2.5 Module <Process Reports>

4.3 Meeting Log

Our meeting began at 8 p.m. on December 11, 2024, with the intention of holding a group discussion centred on the database project's second phase. Every participant showed up at the appointed time, and our conversation got off to a smooth start. Our main objective was to divide up the work equally and come up with ideas together to make sure the project was finished successfully.

Every group member actively participated in our meeting, which ended at 11 p.m. on December 11, 2024, and gave it their all to complete the phase 2 project. To guarantee the smooth operation of our project, each team member provided updates on their individual contributions.
